## HEALTH REPORT

### Notable result

#### **ALT Activity**

Tansy Serenity inherited one copy of the variant we tested for Alanine Aminotransferase Activity

#### **Why is this important to your vet?**

Tansy Serenity has one copy of a variant associated with reduced ALT activity as measured on veterinary blood chemistry panels. Please inform your veterinarian that Tansy Serenity has this genotype, as ALT is often used as an indicator of liver health and Tansy Serenity is likely to have a lower than average resting ALT activity. As such, an increase in Tansy Serenity's ALT activity could be evidence of liver damage, even if it is within normal limits by standard ALT reference ranges.

#### **What is Alanine Aminotransferase Activity?**

ALT is a liver enzyme that vets measure to monitor liver health. With this result, your dog may naturally have a lower ALT baseline. Knowing this helps your veterinarian interpret future bloodwork results more accurately.

#### **How vets diagnose this condition**

Genetic testing is the only way to provide your veterinarian with this clinical tool.

#### **How this condition is treated**

Veterinarians may recommend blood work to establish a baseline ALT value for healthy dogs with one or two copies of this variant.

#### **Actions to take if your dog is affected**

- Talk to your vet about your dog's ALT result, as it may help them better interpret your dog's blood work.
- Dogs with this result do not exhibit symptoms or develop health issues associated with this variant.
